Materials Science and Engineering is an interdisciplinary field. Materials science studies the fundamental physical and chemical basis for the controlled combination of atoms to form new compounds, phases, and microstructures, as well as the characterization of the resulting structures and properties. Materials Engineering focuses on the synthesis of materials in useful quantities, and on the processing of component materials into engineering products. Materials engineering draws heavily on the fundamental knowledge gained from materials science, and adapts the processes involved for the scale and requirements of the application. There is a rich interplay between the science and engineering aspects. Basic studies

frequently find ways to improve the properties of materials, and goal-oriented engineering often reveals aspects of performance that challenge the basic understanding.

A major goal of the Department is to educate students with abilities for scientific and engineering leadership. They will develop knowledge for conducting the next generation technologies, which are also essential for solving societal and environmental issues. The research academic programs unify all classes of materials and processing, including introductory courses and advanced courses in metals, ceramics, polymers, composites and electronic materials and characterization. The MSE educational and research program is interdisciplinary, focusing on all materials - ceramics, electronic materials, metals, minerals and polymers, among others - and their composites. Analytical facilities at the nanotechnology research center support department researchers as well as other universities and industries. The world today is in the midst of a materials revolution, the outcome of which will affect the economic well-being of all nations and all industries. For example, smaller and faster devices in the electronics industry are the results of advanced materials processing. The MSE graduates are highly demanded by industry and research. They are demanded in the field of high-tech industries, i.e. microelectronics and packaging, telecommunications, optoelectronics, and micro-machining. MSE graduates are also employed in conventional industries such as ferrous and non-ferrous metallurgy and their processing, electronic materials, electrical materials, powder metallurgy, ceramics, glass, cement, etc.

Accountants with professional ethics: Cultivate accounting professionals with equal emphasis on professionalism and morality: Accounting is a highly professional discipline, and at the same time, it must have higher ethical and moral standards in order to provide a better and more reliable professional service to society.
4. Computer Auditing and Risk Management: The Computer Audit means an audit of a company's computer networks and related technology and software, as well as the procedures in place with regard to the use of IT resources. It may be undertaken to check the efficiency of the system and turn up any violations. Less often, the term computer audit is used to refer to a tax audit in which a computer is used as a tool to assist the traditional audit process. The Risk management is the identification, evaluation, and prioritization of risks followed by coordinated and economical application of resources to minimize, monitor, and control the probability or impact of unfortunate events or to maximize the realization of opportunities.

在這個以供應鏈競爭的年代，國內外企業往往藉由資訊情報網絡，透過運籌、供應鏈管理，於跨國生產配銷系統中靈活地整合、調配資源，讓產品產生更具價值，利潤更高。此時此勢，企業都非常重視運籌與供應鏈管理。為滿足企業需要，本所致力培養專業運籌、供應鏈管理人才，切合企業全球整合的趨勢。所上老師俱於海外知名學府取得博士學位。自 92 學年度招收第一屆碩士班後，95 學年度起本所於企管所博士班增設運籌管理組，103 學年度起增設碩士班國際組。

本所學生的背景商管與理工科系各半，課程設計跨領域結合，培養學生邏輯分析能力。所上教學研究、企業參訪、演講交流等活動皆力求兼顧理論與實務、科學與管理等層面，讓學生充分學習實務相關的議題，畢業後具有足夠的專業知識和良好的溝通能力適應多變的職場需求。

In this era of supply chain competition, enterprises integrate and allocate resources dexterously through their information networks. Resources are injected into multi-national production-distribution systems to produce more valuable, profitable products. To ride the trend, enterprises now take logistics and supply chain management seriously.

Our Institute focuses precisely on nurturing professionals for logistics and supply chain management, matching the trend of globalization and integration. All the faculty members of the institute hold doctorate degrees, and all from leading overseas universities. After the first batch of Master's students enrolled in 2003, the institute launched the Ph.D. program in logistics management with the Department of Business Administration in 2006, the International Master's Program in Supply Chain and Logistics Management in 2014.

Nearly half of our students come with business and management backgrounds, and about the same proportion with engineering and science. Courses are designed for integrating interdisciplinary concepts and developing logical analysis capability. All our activities, teaching, research, field trips, seminars, and local and overseas exchanges, have the right balance in theory and practice, as well as in science and management. Such an approach enables students to fully

understand issues arising in practical settings. Our goals are that graduates joining the job market possess ample professional knowledge and strong communication skills to adapt to the ever-changing society.

One characteristic of the institute is to provide a channel for students to change their career paths. Many of our graduates coming from business and management studies work in the high-tech industry. Cases of turning a student from language studies to a production planning engineer; economics studies to an IT consultant; and international business studies to a computer analyst are some examples of career changes induced by the institute. About two-third of our graduates' work in high-tech industries, serving in sectors ranging from material control, purchasing, and logistics management in the backend to production, and production planning and control in the frontend. The other one-third work in industrial sectors such as government, banks, ocean freight, land freight, etc. As the training of our students matches with mainstream industries, our graduates are well acclaimed by employers of Taiwan. Providing certificate of proficiency in English will be a plus.
